## Why online backup with Divinsa?

- Backing up data to remote location means you are **safe against threats** which can affect your local machines *and* your local backups, like: fire, theft, natural disaster & electrical problems.
- Divinsa **monitors your online backups and alerts you when attention is needed**, saving you time and money and enhancing your productivity.
- Divinsa's technicians provide **expert configuration advice** and specialize in backup: with our expertise you can handle any backup challenge, and backup any application:

## Divinsa is business-class online backup:

- Cheap unmanaged backup services fail with business-size datasets -- both on backup and restore. Divinsa backs up machines with **millions of files and hundreds of gigabytes of data every day**.
- We **restore files immediately, on demand**. While other backup services maximize their profit from you by making you wait for restores, we proactively prepare your files at backup time and keep them ready to restore, anytime.
- Our zero-configuration installs deal with common issues on large servers, so **you can install quickly and be certain your backups will "just work."**

### Notable Backup Facts and Figures:

- **\$2,900.00**: Average cost of data loss
- **1/3**: number of IT managers who believe major data loss could lead to bankruptcy at their firm
- **5 Years**: Average time before bankruptcy after significant data loss
